

# Keith Finlay

Washington, DC

504 208 5897 • kfinlay@gmail.com • kfinlay.github.io •  kfinlay

## Education

---

**University of California, Irvine**  
*PhD, Economics*

**Irvine, CA**  
2007

**University of California, Irvine**  
*MA, Economics*

**Irvine, CA**  
2006

**Reed College**  
*BA, Economics*

**Portland, OR**  
2000

## Experience

---

**US Census Bureau**

**Washington, DC**

*Economist, Center for Administrative Records Research and Applications*

2015–

- o Developing a national, linked Criminal Justice Administrative Records System (CJARS) housed at the Census Bureau.
- o Designed and built a realtime data discovery tool for administrative records assets at the Census Bureau. This dashboard helps users identify data quality problems using metadata and summary statistics harvested algorithmically from tens of thousands of data files.
- o Constructed a sample frame for the National Survey of Children's Health using administrative records to identify households likely to have children present. This is the first targeted sample frame at the Census built entirely with administrative records.
- o Wrote in-depth data quality reports for administrative records assets and code to remediate quality problems.

**Tulane University**

**New Orleans, LA**

*Assistant Professor, Department of Economics*

2007–2015

- o Conducted research in the areas of applied econometrics, labor economics, and health economics.
- o Taught PhD courses on econometrics, program evaluation, and causal inference.
- o Taught undergraduate courses on econometrics, urban economics, labor economics, program evaluation, and causal inference.
- o Published eight peer-reviewed research articles as well as software packages for conducting applied econometrics; awarded more than \$450,000 in external research funding.
- o Managed department's high-performance computing resources.

## Skills

---

**Parametric and nonparametric statistics:** linear and nonlinear estimation, nonparametric regression, discrete choice modeling, partial identification

**Impact evaluation:** evaluation design, randomized control trials, contingent choice experiments, quasi-experimental research designs

**Survey design:** sample frame construction using administrative records

**Record linkage:** probabilistic record linkage, linked data quality control

**Simulation-based inference:** bootstrap inference, Monte Carlo simulation

**Economics research:** applied econometrics, labor economics, health economics, economic demography

**Computing:** statistical computing and software development (Stata, Python, R, Matlab), databases (SQL), scripting (shell, Python), version control (git), geographic information systems, markup (L<sup>A</sup>T<sub>E</sub>X, HTML)

**Scientific communication:** technical writing, data visualization, grant proposals

## Professional Development

---

**MITx 6.00.1x:** Introduction to Computer Science and Programming Using Python

## Publications

---
